

Cashless, versatile, programmable timer

Standard Contactless Timer

Applications include:

- Sunbeds and saunas
- Tennis and squash court lighting
- Laundry equipment
- Jogging machines
- Hydrotherapy units
- Snooker table lighting
- Vehicle washing
- Internet control
- Air conditioning
- Space heating

The Standard Contactless Timer is the first in a range of contactless payment timers to be introduced by LCI. It is based on the existing standard range to allow for ease of retrofitting an existing timer (see Standard Timer - Contactless Upgrade for information on upgrading an existing timer).

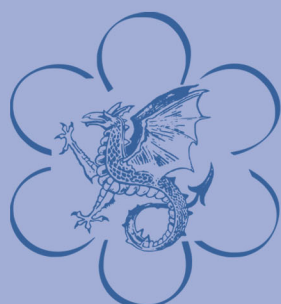

With no need to collect cash, a Contactless Timer allows payment to be made via debit or credit card, as well as Apple, Android, or Samsung Pay. Programmable Smart Payment Cards can also be issued if desired to provide prepaid or free-vend sessions.

The Standard Contactless Timer is an accumulative timer where each additional contactless payment will add the programmed time to any time remaining. It is fitted with a digital display to show the remaining credit. Time per payment can be set in either minutes or seconds with a range from 1 to 127. The case is made from powder coated zintec steel and it has a power consumption of approximately 10W (at 230V AC).

A multiple pricing option allows up to four different pricing structures to be created for one piece of equipment. For example the Contactless Timer could be set for £2.00 = 3 mins; £3.50 = 6 mins; £4.50 = 9 mins and £5.00 = 12 mins. The user selects the time period required on the touchscreen before presenting the card for payment.

The contactless payment system does away with the need to collect and bank cash - users simply tap the card reader with their card. The reader operates using either a mobile phone signal or ethernet connection.

The payment system is managed by Nayax Ltd, a multinational provider of financial services. A small monthly fee and percentage of the transactions covers SIM, data usage, updates, support and 24/7 access to the Nayax DCS portal for reports, machine management and use of Nayax app's for consumer promotions and engagements.
